

IMOVE: The toolbox *'Add in' instead of 'add on'!*

Project / Stand Baseline

#Physical activity

#Pupils' participation

#Math lessons

School health promotion can be viewed as a powerful prevention strategy. One of the preconditions for success is pupils' participation in their own learning. Second, interventions need to be integrated in schools' core business to ensure sustainability. The IMOVE toolbox facilitates participation and uses pupils physical activity as a fruitful and integrated element in schools math lessons.
