# Child and Adolescent Health in Europe

*WHO Europe wants to enable children and adolescents to realize their full potential for growth, health and well-being*

**#governance**

**#intersectoral action**

**#equity**

WHO/Europe promotes governance, partnerships and intersectoral action at all levels of society. Their Child and Adolescent strategy promotes a life-course approach to health and well-being and strong partnerships and intersectoral collaboration. School health promotion is the main strategy to support this. Governments in the 53 Member States are recommended to make every school a health promoting school.
